

SLAM
Wood Leg

L e l a n d

Slam is a holistic and comprehensive seating solution offering material options suitable for all settings throughout an installation. The Slam wood leg brings another layer of warmth to this product providing specification options with dining, guest, and even residential appeal.

DESIGNER/Liévore Altherr Molina

FEATURES

The wood base can be specified with all Slam shell options including polypropylene, fully upholstered, or 3D veneer. An optional upholstered seat onlay can also be specified.

An elegant monolithic design can be achieved by specifying the veneer shell and wood legs in the same Leland finish.

The Slam wood base attachment method provides a precise fitting between the shell and base. This presents a clean visual from any angle while affording the necessary structure and strength for contract use.
